Version 1.0 | 09 Nov 2026

OUR PROMISE FOR QUALITY AND SAFETY :

Quality

- NABL accredited since 2001
- Triple quality check assured
- Each test report viewed by a Dr. Dang
- Highest doctor to patient ratio
- Winner of National Laboratory Excellence Award 2022 (Prof. SK Joshi Award) by Quality Council of India, best Path Lab (National) award by ET Healthcare, & FICCI Healthcare Excellence Award in patient experience.

Safety

- Mandatory guidelines for single use PPE
- Single use, sterile and safe blood collection kits & temperature controlled transportation of samples
- Strict infection control protocols
- Regular screening of staff and vaccination drives
- Safe home collection services available all over Delhi NCR.

Introducing

Functional Medicine

Functional medicine testing transcends traditional symptom-based approaches, employing a comprehensive analysis of biochemical and metabolic markers. By delving deeper into the interconnectedness of bodily systems, including gut health, hormonal balance, and sleep patterns, these tests aim to identify the root cause of health concerns rather than simply treating symptoms. This holistic perspective allows healthcare practitioners to develop personalized interventions tailored to each individual's unique needs, leading to a more proactive and preventive approach to health optimization.

Contents

1. SMART CHECK PROFILES (SMART SCREEN & SMART CHECK)

2. ADVANCED SMART CHECK PROFILE

3. SUPERIOR SMART CHECK PROFILE

4. PREMIUM SMART CHECK PROFILE

5. COMPREHENSIVE HEALTH PROFILE

6. COMPREHENSIVE HEALTH PROFILE WITH PSA

7. SIGNATURE COMPREHENSIVE HEALTH PROFILE

8. FATIGUE PROFILE

9.10. VITAMINS MINERALS PROFILES BASIC, ADVANCED & COMPREHENSIVE

11.12. FEMALE HORMONE PROFILE & PMOS PROFILE (PCOS/PCOD)

13. COMPREHENSIVE THYROID PROFILE

14. ARTHRITIS PROFILE

15.16. FEVER PROFILES BASIC & ADVANCED

17. FLU PANELS

18. BASIC MALE HORMONAL PROFILE

19.20. STD PROFILE BASIC & COMPREHENSIVE

Contents

21. ALLERGY PROFILES (IGE BASED)

22. FOOD INTOLERANCE PROFILES (IGG BASED)

23.24. CARDIO-METABOLIC PANELS

25. DIABETES/ HYPERTENSION PROFILE

26. COMPREHENSIVE DIABETES PROFILE

27. MENOPAUSE PROFILES

28. BLOATING PROFILES

29. BREATH TESTS (H. PYLORI, SIBO & MALABSORPTION)

30. BASIC OBESITY PROFILE

31.32. LONGEVITY PANELS

33.34. CORTISOL AWAKENING RESPONSE & SALIVARY CORTISOL

35. BASIC HAIRFALL PROFILE

36. ANEMIA PROFILE WITH HPLC

37. ULTRA COMPREHENSIVE HEALTH PROFILE

38. ULTRA COMPREHENSIVE HEALTH PROFILE WITH PSA

39. CANCER MARKERS

40. MULTI-CANCER DETECTION TEST

41. FITNESS PROFILES

Disclaimer: The test profiles are designed to provide general guidance for wellness and diagnosis. Your doctor is the best judge of which tests are necessary for you.

Smart Check Profiles

SMART SCREEN CHECK PROFILE

(Smart Screen)

The essential first look. Nine core analytes covering blood sugar, blood count, kidney and liver function and cholesterol: the right starting point if you have not been tested in a while, and the simplest way to decide what to look at next.

- Blood Glucose Fasting*
- Haemoglobin
- Total Leucocyte Count
- Urea
- Creatinine (with eGFR)
- SGOT
- SGPT
- Total Cholesterol*
- Triglycerides*

★★½

Indicative of extent of test coverage.

INR 1,900

CLICK HERE TO BOOK A HOME COLLECTION

SMART CHECK PROFILE

(SMAC)

A basic yet powerful package giving a bird's-eye view of your metabolism. Beyond the Smart Screen Check it adds a full blood count with ESR, complete kidney and liver panels, Magnesium (deficiency causes fatigue) and the muscle marker CPK.

- Blood Glucose Fasting*
- CBC with ESR
- Lipid Profile*
- Kidney Function Test
- Liver Function Test
- Magnesium
- C.P.K.

★★

Indicative of extent of test coverage.

INR 3,500

RETURN TO INDEX

Note: Tests marked with * require minimum 10-12 hours fasting. LDL cholesterol is not reported on the Smart Screen Check. The Smart Screen Check reports Haemoglobin and Total Leucocyte Count; should any other blood-count parameter be raised, your report will say so, and you can connect with us on 9999992020 to convert to a full Complete Blood Count.

Advanced Smart Check Profile

ADVANCED SMART CHECK PROFILE
(Advanced SMAC)

This package couples the advantage of Glycosylated Hemoglobin (HbA1c) which gives you an average estimation of your sugar levels over the past 3 months, as well as the well-established Thyroid Profile with Free T3, Free T4 and Ultra-sensitive TSH while continuing to give you all the benefits of a Smart Check Profile.

- Blood Glucose Fasting*
- CBC with ESR
- Lipid Profile*
- Kidney Function Test
- Liver Function Test
- Magnesium
- C.P.K.
- Thyroid Profile with FT3, FT4, Ultra-sensitive TSH
- HbA1c (Glycosylated Hemoglobin)

★★★ Indicative of extent of test coverage.

Note: Tests marked with * require minimum 10-12 hours fasting.
PSA testing is recommended for men over 40-45 years for prostate cancer screening.

INR 4,750
with PSA (Total) **INR 5,150**

Superior Smart Check Profile

SUPERIOR SMART CHECK PROFILE
(Superior SMAC)

The superior smart check profile adds an assessment of key vitamins such as vitamin D3 and vitamin B12 along with IgE (which gives you an indication of your body's response to allergy), beyond all the value of an Advanced Smart Check. This package encourages you to consider a superior choice in a health check & this package is highly recommended for persons of any age group who are looking for a simplified yet effective evaluation by blood tests.

- Blood Glucose Fasting*
- CBC with ESR
- Lipid Profile*
- Kidney Function Test
- Liver Function Test
- Magnesium
- C.P.K.
- Thyroid Profile with FT3, FT4, Ultra-sensitive TSH
- HbA1c (Glycosylated Hemoglobin)

with PSA (Total) **INR 9,000**

Premium Smart Check Profile

PREMIUM SMART CHECK PROFILE

(Premium SMAC)

Premium smart check profile amplifies the advantages of the superior smart check by including additional tests that provide a greater in-depth analysis of your health. The additional tests include Vitamin B9/ folic acid, a detailed urine analysis, complete iron studies including ferritin, iron binding capacity, and transferrin saturation. The inclusion of High Sensitive CRP is a huge plus with the test being a sensitive marker for evidence of inflammation as well as cardiac risk assessment. This package is highly recommended to persons of any age group who are looking for an extensive and effective evaluation by blood tests.

- Blood Glucose Fasting*
- CBC with ESR
- Lipid Profile*
- Kidney Function Test
- Liver Function Test
- Magnesium
- C.P.K.
- Thyroid Profile with FT3, FT4, Ultra-sensitive TSH
- HbA1c (Glycosylated Hemoglobin)

Comprehensive Health Profile

COMPREHENSIVE HEALTH PROFILE
(CHP)

An all-inclusive package covering various tests scientifically proven to have a role in preventive health testing. This package is also extremely useful for the monitoring of patients with Hypertension, Diabetes, Cardiac, Kidney, Thyroid, Pancreas and Liver conditions; Vitamin deficiencies and Inflammation. CHP also has Cystatin C & Microalbuminuria, an early indicator of kidney disease; High Sensitivity CRP, a very sensitive marker of Inflammation/cardiac risk; total serum IgE as well as a detailed urine examination. This package is highly recommended to persons of any age group who are looking for comprehensive insights into their health via urine and blood tests.

- Blood Glucose Fasting*
- CBC with ESR
- Blood Glucose PP**
- Lipid Profile*
- Kidney Function Test
- Cystatin C
- Liver Function Test
- Magnesium

Signature Comprehensive Health Profile

SIGNATURE COMPREHENSIVE HEALTH PROFILE
(Signature CHP)

Everything in the Comprehensive Health Profile, with additional tests that help answer questions the CHP can raise but cannot settle: Oxidised LDL, HOMA2-IR, RBC Magnesium, Vitamin B1 and Vitamin B6. Oxidised LDL identifies the damaged lipid fraction most closely associated with plaque. HOMA2-IR quantifies insulin resistance instead of inferring it from a single sugar reading. RBC Magnesium reflects tissue magnesium status better than a serum level. Vitamins B1 and B6 are the energy and nerve vitamins most often depleted, and appear in few standard vitamin panels.

Fatigue Profile

FATIGUE PROFILE

This profile helps in determining the causative factors of long-term fatigue and weakness. The profile includes an assessment of key vitamins, minerals and essential parameters, deficiency of which may cause fatigue. Additionally, it also includes an inflammatory marker, liver enzymes, electrolytes, blood counts along with a complete kidney function test, tests for diabetes, cortisol (the body's stress hormone) as well as urine analysis to ascertain the cause of fatigue. ANA (antinuclear antibody) screening for autoimmune disorders is also included in the fatigue profile.

Vitamins & Minerals Profiles

VITAMINS & MINERALS PROFILES

Deficiency of vitamins and minerals is a common cause of anemia, fatigue, muscle cramps, joint pains, tingling sensations, frequent infections, and other vague health complaints. These micronutrients are vital for immunity and overall well-being. Adequate Vitamin D protects against infections and reduces the risk of several non-communicable diseases. Our three profiles, Basic, Advanced and Comprehensive, are excellent add-ons to Smart Check, Advanced Smart Check, or any monitoring panel.

The Basic profile covers the core vitamin, iron-studies and mineral panel. The Advanced profile adds Vitamin B1 (thiamine) and Vitamin B6 (pyridoxine), the two energy and nerve vitamins most often depleted; Active B12 (holotranscobalamin), the fraction of vitamin B12 available to cells, which can reveal a deficiency when total B12 looks normal; Vitamin A for vision; Vitamin E for skin and immune health; and a urine test for iodine. The Comprehensive profile completes the energy B-group with Vitamin B2 (riboflavin) and Vitamin B5 (pantothenic acid), and further adds Vitamin C, RBC folate (a more accurate estimate of vitamin B9), sTfR (an advanced marker of iron deficiency), ionised calcium and RBC magnesium, which reflects true tissue magnesium status better than a serum level.

Additionally, it is advisable to monitor these values if you have been taking vitamins for a prolonged period without any doctor's advice or prescription.

OPTIONAL ADD-ON

Methylmalonic Acid (MMA)

Female Hormone Profile

FEMALE HORMONE PROFILE

An imbalance in female hormones can lead to irregular periods, bloating, fatigue, irritability, hair loss, palpitations, mood swings, diabetes, lack of ability to concentrate, issues with fertility, hirsutism (excessive hair), premature menarche, etc. This profile can also be used in various conditions such as amenorrhea, dysfunctional uterine bleeding, and to assess ovarian function. Physicians often ask for a female hormonal profile to be performed on Day 2/3 of the menstrual cycle with a pooled and mid-morning sample for prolactin.

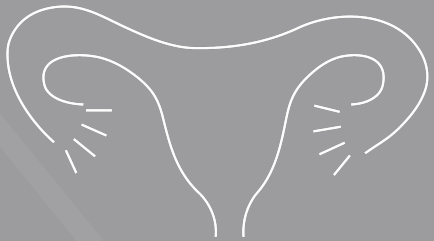

- FSH
- LH

PMOS Profile (PCOS/PCOD)

PMOS PROFILE (PCOS/PCOD)

Polyendocrine Metabolic Ovarian Syndrome (PMOS), formerly known as polycystic ovary syndrome (PCOS) or PCOD, is a common hormonal and metabolic condition. It can involve irregular periods, acne, excess hair growth (hirsutism), hair thinning, weight gain, insulin resistance and difficulty conceiving. This profile combines reproductive hormones, androgens, thyroid function and markers of insulin resistance, together with 17-hydroxyprogesterone to help exclude other causes of androgen excess. Results should be interpreted together with clinical assessment and, where indicated, ultrasound, to reach a diagnosis.

- Blood Glucose (Fasting)*
- FSH
- LH
- Progesterone
- Insulin (Fasting)*
- HOMA2-IR* (Insulin Resistance Index)
- Estradiol [E2]
- Thyroid profile with FT3, FT4, Ultra-sensitive TSH

INR 10,200

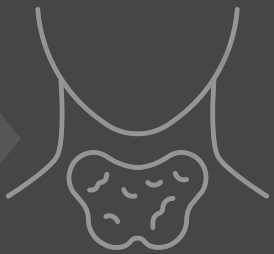

Note: Tests marked with * require minimum 10-12 hours fasting.
17-Hydroxyprogesterone may help evaluate selected alternative causes of androgen excess; timing and interpretation should be guided by the clinician.

Comprehensive Thyroid Profile

COMPREHENSIVE THYROID PROFILE

Dr. Dangs Lab offers a state-of-the-art Comprehensive Thyroid Profile, a vital tool in assessing thyroid health. This comprehensive panel includes key markers such as thyroid profile with FT3, FT4, ultra-sensitive TSH, anti-thyroglobulin antibodies, anti-thyroid peroxidase (Anti-TPO), reverse T3 (RT3), as well as Total T3 and Total T4 levels. These precise measurements provide a thorough evaluation of thyroid function, aiding in the diagnosis and management of thyroid disorders and ensuring comprehensive and accurate insights into the individual's health.

- Thyroid profile with FT3, FT4, Ultra-sensitive TSH
- T3, total
- T4, total
- Anti-TG: anti-thyroglobulin antibodies
- Anti-TPO: anti-thyroid peroxidase antibodies
- Reverse T3 (RT3)

Arthritis Profile

ARTHRITIS PROFILE

The Arthritis Profile assesses the several reasons due to which an individual could be having pain in the bones or joints. This profile confirms the Rheumatoid Arthritis factor (RA), and also has a vitamin check, markers for inflammation, and autoimmune screening (ANA). These assist the clinician in making a definite diagnosis. The detection of anti-CCP antibodies confirms the presence of rheumatoid arthritis, establishes a prognosis for the progression of the disease, and helps determine the best possible treatment.

Fever Profiles

FEVER PROFILES

Fever Profile Basic screens for common causes of fever such as Malaria, Typhoid, Dengue, and Urinary infections. It also includes CBC with ESR, the most frequently prescribed test, providing valuable information on blood counts including platelets to help define the nature of fever and its treatment. Fever Profile Advanced offers all these benefits, along with extended investigations for Typhoid, Chikungunya, Scrub Typhus, Mumps, Leptospira, and Lyme's disease. It also includes culture/sensitivity of urine, throat, and blood samples, CRP to assess inflammation and recovery, and liver enzymes as markers of liver infection. Fever Profile Basic and Advanced also include Quantitative G6PD Activity. G6PD deficiency can cause red cells to break down with certain antimalarial and antibiotic medicines, so knowing your status helps your doctor treat a fever safely. For seasonal needs, our Monsoon Fever Panel provides a focused approach to quickly identify the most common infections prevalent during the rainy season.

Flu can be a common cause of fever.

FLU PANELS

Respiratory infections can be caused not only by influenza viruses but also by a host of other pathogens. These commonly spread through respiratory droplets, and symptoms may include fever, congestion, cough, sore throat, fatigue, and body aches, etc. Diagnosing accurately is essential to manage symptoms early, reduce complications, and prevent unnecessary use of antibiotics.

Dr. Dangs Lab offers advanced diagnostic options for upper respiratory infections through our Influenza Panel, Comprehensive Flu Panel, and Respiratory BioFire. These tests vary in coverage, identifying a wide range of pathogens, including influenza viruses and other respiratory agents. Using oropharyngeal and nasopharyngeal swabs, these tests provide precise results, helping physicians tailor treatment accordingly. Accurate testing ensures better patient care and supports public health by managing seasonal outbreaks effectively.

For more information, please Click here OR call us at 999 999 2020.

Basic Male Hormonal Profile

BASIC MALE HORMONAL PROFILE

Basic male hormonal profile measures the levels of hormones that play an active role in men's health and may be an important part of sexual health as well as general well-being in men. Cortisol, also known as the stress hormone, and a thyroid profile with FT3, FT4, and ultra-sensitive TSH are included along with all other essential male hormones. This profile gives a broader picture of your health and is useful in determining the reasons behind general weakness, inability to lose weight, sexual dysfunction, and various lifestyle-related issues among males.

Basic STD Profile

BASIC STD PROFILE

The basic sexually transmitted disease profile is a combination of the most frequently contracted and screened-for infections linked to unprotected sex. The reason to get an STD panel done is to identify and treat one's own infection and also prevent passing on the infection to a partner. HIV Combo, comprising the HIV P24 Antigen & the HIV Antibody, Hepatitis B, C, Syphilis, and genital Herpes, diagnosis can be made by the tests included in this panel.

- HIV Combo
- HBsAg for Hepatitis B
- HCV Antibodies for Hepatitis C
- Syphilis by CLIA
- Herpes Simplex 2 IgM

Comprehensive STD Profile

COMPREHENSIVE STD PROFILE

Comprehensive STD profile additionally tests for the molecular STD panel (Chlamydia trachomatis, Neisseria gonorrhoeae, Trichomonas vaginalis, Gardnerella vaginalis, Mycoplasma genitalium, Mycoplasma hominis, Herpes simplex virus 1/2, Ureaplasma species, Candida albicans, Cytomegalovirus, Human papillomavirus types 16 & 18) beyond testing for HIV, Hepatitis B, Hepatitis C and Syphilis, which form a part of the basic STD profile. Organisms included in the comprehensive STD panel include common sexually transmitted infections often presenting as unusual discharge, genital sores, itching, pain during urination or sex. The molecular STD panel tests are tested using a molecular method, i.e., nucleic acid amplification technique (NAAT), which provides the very best of results. Many STDs can also be asymptomatic, so regular screening is important, especially if you have new or multiple partners. Always keep in mind the window period of the infection while testing for STDs.

- HIV Combo
- HBsAg (Hepatitis B)
- HCV Antibodies (Hepatitis C)
- HSV2 IgM
- Syphilis
- TPHA (Treponema pallidum Hemagglutination Assay)

Allergynius Dx

ALLERGY PROFILES (IGE BASED)

IgE based immediate allergies are most commonly caused by aeroallergens (respiratory allergens) & food allergens. These present with respiratory symptoms (sneezing, wheezing, cough, breathing difficulties, allergic rhinitis etc.) or skin related (hives, urticaria, rashes etc.) symptoms, respectively.

Allergynius Dx is a Molecular Allergy Diagnostics test based on Microarray using Nanotechnology and provides results for 163 food and respiratory allergens along with 294 components. This cutting-edge allergy testing is supported by AI-assisted interpretation, reviewed by our doctors, that is provided along with the report.

Profile	Allergens	Components	Price (INR)
Comprehensive Allergy profile	163 Allergens	294 Components	28,800/-
Food profile	94 Allergens	154 Components	25,500/-
Respiratory profile	62 Allergens	122 Components	25,500/-

Food Intolerance Profiles

FOOD INTOLERANCE PROFILES (IGG BASED)

IgG-based food intolerance testing (IMUPRO) looks at diet-related immune responses that are associated with gut-related symptoms, such as bloating, gastritis, constipation, diarrhoea, irritable bowel syndrome (IBS), inflammatory bowel disease (IBD), nausea, and also other symptoms like chronic pain, chronic weight problems, skin problems (atopic dermatitis, eczema, psoriasis), and nervous system disorders.

There are various food panels available for testing: 22/44/90 vegetarian, 90 non-vegetarian, 180, and 270 foods are available, and the one most appropriate for you needs to be selected as per your daily diet.

Cardio-metabolic Panels

CARDIO-METABOLIC PANELS

Heart disease, diabetes and kidney disease are increasingly understood as one connected process rather than three separate illnesses. They share common roots in disordered lipids, insulin resistance, low-grade inflammation and early kidney injury, and these changes usually begin years before any symptom appears. Our Cardio-metabolic Panels bring these strands together in a single blood draw, for men and women alike.

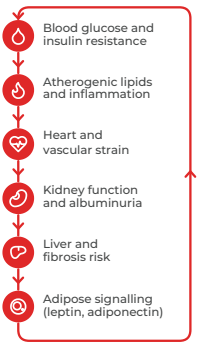

The lipid picture goes beyond a routine profile. A standard lipid profile measures cholesterol, whereas Apolipoprotein B counts the particles that actually carry it into the artery wall. Lipoprotein (a) is inherited, needs to be measured only once in a lifetime, and is not captured by a standard profile. Oxidised LDL identifies the chemically damaged fraction most closely associated with plaque, while hs-CRP, homocysteine and Lp-PLA2 describe the inflammation around it.

Glucose control and insulin resistance are read together: fasting glucose and HbA1c show where you stand today, and HOMA2-IR with C-peptide shows how hard the pancreas is working to keep you there, a change that may be visible a decade before blood sugar rises.

The kidneys and liver are assessed while injury is still reversible. eGFR with a spot urine albumin-creatinine ratio detects early kidney injury, and the FIB-4 score estimates liver fibrosis from routine enzymes and platelets, without any additional sample.

Finally, NT-proBNP reflects strain on the heart muscle, high-sensitivity Troponin I and T detect minor heart-muscle injury, and Leptin with Adiponectin together describe how fat tissue is behaving.

ONE CONNECTED CARDIO-METABOLIC SYSTEM

Insulin resistance, atherogenic lipids, inflammation, liver dysfunction, early kidney injury and cardiac strain can reinforce one another, often before symptoms appear.

NOW AVAILABLE

Mini Omega Panel **INR 6,500**

Reads the balance of inflammatory and protective fats in your blood. Useful in heart disease risk, chronic inflammation, joint pain and diabetes, and to guide fish-oil supplementation. Can be added to any Cardio-metabolic Panel.

Diabetes/ Hypertension Profile

DIABETES / HYPERTENSION PROFILE

Diabetes is understood as a disease where there is excess glucose in the blood, and it is hence often assumed that having fewer sweets can help overcome the illness. However, it is critical to keep a lookout for the complications of diabetes, which cause permanent damage. A fair number of patients have both hypertension as well as diabetes, which doubles the risk of organ damage. This profile puts together tests to monitor diabetes and hypertension and their commonly associated complications.

For resistant hypertension (Renin & Aldosterone), please ask our front office.

Comprehensive Diabetes Profile

COMPREHENSIVE DIABETES PROFILE

Comprehensive diabetes profile provides an edge over the tests in the diabetes and hypertension profile by giving an in-depth view of the function of kidneys and pancreas in relation to blood glucose levels. This profile is ideally suited for those who need to track diabetic markers holistically and require a more detailed analysis. The additional tests in this profile include complete kidney function tests, fasting insulin, eGFR, HOMA2-IR, and C-peptide.

Menopause Profiles

MENOPAUSE PROFILE

At Dr. Dangs Lab, we recognise that menopause is a profound biological transition, influencing hormonal balance, metabolic health, and overall well-being. Our Menopause Profiles are meticulously curated to provide clinicians and patients with a comprehensive, evidence-based assessment of this life stage. These profiles serve as powerful tools for early intervention, personalised treatment planning, and optimising quality of life during midlife and beyond.

CLICK HERE TO BOOK A HOME COLLECTION

BREATH TESTS

(H. pylori, SIBO & Carbohydrate Malabsorption)

Breath testing is a simple, non-invasive and radiation-free way to investigate persistent bloating, gas, abdominal pain, altered bowel habit and unexplained nutrient deficiencies. You simply blow into collection tubes at timed intervals before and after a test drink; the gases measured reveal what is happening inside the stomach and small intestine.

The Urea Breath Test for Helicobacter pylori is the most sensitive non-invasive test to detect an active H. pylori infection (a common cause of gastritis, ulcers and dyspepsia) and to confirm its eradication after treatment. The SIBO Breath Test (Small Intestinal Bacterial Overgrowth) measures hydrogen and methane after a glucose or lactulose drink, to detect excess bacteria in the small intestine causing bloating, diarrhoea or constipation. The Lactose Intolerance / Malabsorption Breath Test confirms lactose intolerance as the cause of bloating, cramps or diarrhoea after milk and dairy products, and other carbohydrate malabsorption breath tests look at fructose and related sugars for symptoms triggered by fruit, sweeteners and processed foods.

Urea Breath Test (H. pylori): takes 30 minutes. 12-hour fast; no antibiotics for 4 weeks; no bismuth preparations, antacids or PPIs for 2 weeks, unless your doctor advises otherwise. SIBO and malabsorption tests take up to 3 hours. For the lactose or fructose test, the same diet and 12-hour fast apply; please ask us about your medicines when you book. Prior appointment is needed: 9999992020 or our front desk.

PREPARING FOR A SIBO BREATH TEST

Preparation instructions, including which medicines to pause and when, will be shared on request. Please ask when you book.

If you are unable to stop any medicine as advised, please inform our team before the test, along with relevant clinical details and the name of your treating doctor. The report will be interpreted in the context of the information provided. Continued medication may affect the result, and interpretation remains subject to clinical correlation by your treating doctor.

Do not stop any prescribed medicine without advice from your treating doctor.

Test	Price
Urea Breath Test (H. pylori)	**INR 5,500**
SIBO Breath Test, 2 hour	**INR 10,500**
SIBO Breath Test, 3 hour	**INR 12,500**
Carbohydrate Malabsorption / Intolerance Breath Test (Lactose or Fructose)	**INR 12,500** per substrate
Home collection, SIBO or Lactose	**+ INR 2,500**

Basic Obesity Profile

BASIC OBESITY PROFILE

This profile is helpful for individuals who are planning weight reduction for themselves and need to assess metabolic functions and hormonal levels that might contribute to obesity. It assesses the common causes of obesity, including derangements in lipid levels, insulin resistance, thyroid, and a liver function test, along with the stress hormone, i.e., cortisol, and Leptin, a hormone that regulates hunger, appetite and body weight. Adiponectin, a protective hormone released by fat tissue, is now added; low levels indicate insulin resistance and a higher risk of diabetes and heart disease. An optional Salivary Cortisol Awakening Response (three at-home saliva samples at 0, 30 and 60 minutes after waking) helps characterise the early-morning cortisol pattern in people with persistent stress, fatigue or disrupted sleep.

- Blood Glucose Fasting*
- CBC
- Insulin Fasting*
- Liver Function Test

Longevity Panels

LONGEVITY PANELS

Measure. Explain. Predict.

Ageing is not a single process. It is inflammation that never fully resolves, lipid particles that oxidise, insulin that gradually stops working, micronutrient reserves that quietly empty, a stress axis that loses its rhythm, and a genome that was set at birth. Our three Longevity Panels examine these layers at increasing depth, with each panel helping to explain the findings of the one before it.

Longevity Screen looks at what the body is doing now. It brings together inflammatory and coagulation markers, including the Neutrophil-to-Lymphocyte Ratio from the blood count as a simple index of low-grade inflammation, atherogenic lipid particles with oxidised LDL, insulin resistance, the full micronutrient reserve including the energy B-vitamins, the Lactate:Pyruvate Ratio as a marker of mitochondrial energy production, and thyroid function. A Digital Cognitive Assessment records memory, attention and processing speed today, so that every future test has a baseline to be compared against.

Longevity Advanced asks why. Circulating levels describe intake, whereas RBC Magnesium and RBC Folate describe what actually reached the tissue, and the gap between the two is often where a deficiency hides. A Cortisol Awakening Response with a late-night salivary cortisol maps the stress axis across a full day. Epstein-Barr Virus serology shows whether a past infection is present, which is worth knowing when fatigue will not settle.

Longevity Comprehensive looks at what was inherited, and at what may have been acquired. ApoE genotyping informs late-onset Alzheimer's and cardiovascular risk, Lipoprotein (a) is a once-in-a-lifetime inherited measurement, and a genetic panel covers MTHFR, Prothrombin G20210A and Factor V Leiden. Lyme Disease serology (IgG and IgM) looks for a tick-borne infection that can quietly affect the joints, nerves and heart.

Cortisol Awakening Response

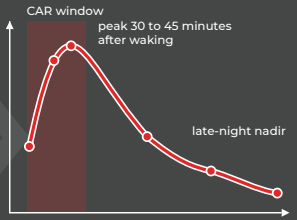

CORTISOL AWAKENING RESPONSE

(CAR) & Salivary Cortisol Testing

Cortisol is the body's principal stress hormone, released by the adrenal glands under the control of the brain's hypothalamic-pituitary-adrenal (HPA) axis. In health it follows a distinct daily rhythm: levels rise sharply by 50-75% within 30-45 minutes of waking, the Cortisol Awakening Response, and then fall steadily through the day to a low point at bedtime. Chronic stress, burnout, poor sleep, depression, shift work and long-standing illness flatten or exaggerate this pattern long before any routine blood test becomes abnormal.

Why saliva**?** Most cortisol in blood is bound to carrier proteins and inactive. Saliva contains only the free, biologically active fraction, making salivary cortisol the preferred sample for measuring what your tissues are actually exposed to. It is also unaffected by oral contraceptives, oestrogen therapy or pregnancy, all of which raise total blood cortisol. The sample is collected painlessly at home by placing a small swab in the mouth: no needle, no early-morning trip to the lab, and no distortion of the result by the stress of a blood draw.

Who should consider it**?** Anyone experiencing persistent fatigue, burnout, anxiety, disturbed sleep, difficulty losing weight, frequent infections or "feeling wired but tired"; patients being evaluated for adrenal over- or under-activity (Cushing's syndrome, adrenal insufficiency); and those on a longevity, performance or stress-management programme who wish to track HPA-axis resilience over time.

The Cortisol Awakening Response: three saliva samples map the early-morning surge.

The full-day curve, from the morning peak to the late-night low, is mapped by the midday, evening and bedtime samples.

OPTIONAL ADD-ON

Salivary DHEA-S

to any salivary cortisol test

Price and sample details on request: **999 999 2020**

RETURN TO INDEX

SALIVARY CORTISOL TESTING, FORMATS AVAILABLE

Format	Samples	When to collect & what it tells you	Price
Single Random Salivary Cortisol	1	One sample at any time of day, or at a time specified by your physician (e.g. late-night for suspected Cushing's syndrome). A quick snapshot of free cortisol.	**INR 3,500**
Cortisol Awakening Response (CAR)	3	Samples immediately on waking (0 min), then at 30 and 60 minutes after waking, before eating or brushing teeth. Measures the size and timing of the morning surge, the most sensitive indicator of HPA-axis resilience, chronic stress and burnout.	**INR 4,500**
4-Point Diurnal Salivary Cortisol	4	Samples in the morning, at noon, in the evening (5-6 pm) and at bedtime. Maps the entire daily curve to detect a flattened or reversed rhythm seen in chronic stress, sleep disorders and depression.	**INR 6,500**
6-Point Diurnal Salivary Cortisol	6	Combines the CAR (0, 30, 60 min after waking) with noon, evening and bedtime samples. The most complete assessment of both the awakening response and the full diurnal rhythm in a single day.	**INR 9,900**

If you are unable to stop any medicine as advised, please inform our team before the test, along with relevant clinical details and the name of your treating doctor. The report will be interpreted in the context of the information provided. Continued medication may affect the result, and interpretation remains subject to clinical correlation by your treating doctor.

Prior appointment is needed. Please connect with us on 9999992020 or at our front desk.

New: Digital Cognitive Assessment. Alongside salivary cortisol, which looks at stress and burnout, your brain health can now be checked too. One of the first tests of its kind: a 20-minute digital assessment of memory, attention and processing speed that gives you a Brain Age score, a simple first screen for mild cognitive impairment. To take it, call 9999992020 or write to info@drdangslab.com.

Basic Hairfall Profile

BASIC HAIRFALL PROFILE

The Basic Hairfall Panel is designed to help identify common underlying causes of hair loss by assessing key health markers. Hairfall can result from a variety of factors, including hormonal imbalances, nutritional deficiencies, and other health issues. This comprehensive package includes essential tests such as the Thyroid profile with FT3, FT4, Ultra-sensitive TSH, CBC with ESR, Magnesium, Vitamin D3 and Vitamin B12. It also measures Total Calcium, Phosphorus, Folic Acid (B9), Ferritin, Iron, TIBC, Transferrin Saturation, UIBC & Zinc. This profile also includes DHEA-S (Dehydroepiandrosterone Sulfate) i.e. a hormone produced by the adrenal glands that serves as a precursor to male and female sex hormones. Together, the panel assesses common correctable contributors to diffuse hair shedding, including iron deficiency, thyroid dysfunction and selected nutritional deficiencies.

- Thyroid profile with FT3, FT4, Ultra-sensitive TSH
- CBC with ESR
- DHEA-S (Dehydroepiandrosterone Sulfate)
- Vitamin D3

Anemia Profile with HPLC

ANEMIA PROFILE WITH HPLC

The Dr. Dangs Lab Anemia profile with HPLC not only diagnoses anemia but also helps ascertain the cause for the same.

A complete blood count with reticulocyte count and detailed peripheral smear analysis provides a wealth of information in the assessment of a patient with anemia and guides whether these could be due to nutritional deficiencies (Iron, Vitamin B12, Folate), abnormalities in red blood cells, abnormal Hemoglobins, infections, variant hemoglobinopathies, depressed marrow function or cancers. The work-up also includes evaluation for hemolysis: Quantitative G6PD Activity to detect G6PD deficiency, and Indirect Coombs Test (ICT), Direct Coombs Test (DCT) and serum haptoglobin to rule out autoimmune hemolytic anemia.

- CBC with Reticulocytes
- LDH
- Iron
- Ferritin

Multi-Cancer Detection Test

MULTI-CANCER DETECTION TEST

By Guardant Health, now available through Dr. Dangs Lab

One blood draw. Multiple cancer signals.

Many cancers may not cause symptoms in the early stages, and not all cancers have routine screening pathways today. This is why newer blood-based screening approaches are becoming part of more informed preventive health conversations.

The test is intended to detect 10 cancers with a single blood draw, including cancers responsible for approximately two-thirds of all cancer-related deaths.

The Multi-Cancer Detection (MCD) test* by Guardant Health, a leader in blood-based cancer testing for over a decade, is backed by more than 1 million oncology blood samples.

A version of Guardant Health's MCD test has received US FDA breakthrough device designation^

CANCER TYPES INCLUDED

Bladder · Breast · Colorectal · Esophageal · Stomach (Gastric) · Liver (Hepatocellular) · Lung · Ovarian · Pancreatic · Prostate

WHO SHOULD CONSIDER SCREENING?

- Are 45 years of age or older
- Aspire to be proactive about preventive healthcare
- Have not recently reviewed your cancer screening plan
- Do not have a known diagnosis of cancer

OVERALL PERFORMANCE SHIELD MCD TEST RESULTS

99% Specificity (436/442)[4]

93% Primary or secondary CSO accuracy[4]

80% are aware and think that cancer can be preventable
Only about half practice prevention behaviours (including screening)[6]

74% Sensitivity in the 6 most aggressive cancers (defined as the shortest survival rates)[4,5]
Includes esophageal, gastric, hepatocellular, lung, ovarian, and pancreatic cancers.

Click Here To Learn More

CLICK HERE TO BOOK A HOME COLLECTION

^The US FDA Breakthrough Device designation referenced includes eight cancer types: bladder, colorectal, esophageal, gastric, liver, lung, ovarian, and pancreatic cancer. *Your clinical eligibility will be determined by the medical provider with whom you have scheduled your appointment. The MCD test is intended to complement, not replace, guideline-recommended cancer screening tests. This test is not diagnostic. A positive result requires further clinical evaluation, and a negative result does not rule out cancer. Continue guideline-recommended screenings as advised by your doctor. Price and bookings: please connect with us on or at our front desk.

Fitness Profiles

FITNESS PROFILES

The Dr. Dangs Lab Fitness Profile helps active individuals identify deficiencies affecting performance & issues like weakness, cramps, or electrolyte imbalance. It screens for anemia, diabetes, lipids, proteins, vitamins, minerals, kidney and muscle health. Separate Profiles are available for females and males. Both panels include liver markers (SGOT, SGPT) for liver metabolism, and the male panel also includes Testosterone (free & total) for strength and muscle growth assessment.

Females (INR 6,900)

COMMENTS

A) For tests marked with an asterisk (*) sample is to be collected after a 10-12 hour fast with a light vegetarian non fatty meal without alcohol the night before. Water is permissible during the fasting period.

B) Sterile container for urine sample if part of your package will be provided to you when the phlebotomist comes for your sample collection or can be collected a day prior from the lab/ purchased from a nearby pharmacy.

C) Please inform the phlebotomist regarding any allergies to topical alcohol and bandaid.

D) PP (post prandial) sample for blood sugar is to be drawn 2 hours post finishing your meal OR 2 hours post consuming glucose (as recommended by your physician).

E) Recommended frequency of packages for preventive health check purposes is yearly or as prescribed by your physician.

F) All prices mentioned in this brochure are in Indian Rupees (INR).
